- ❑ Advice in connection with Insurance Claims
- ❑ Mobile Telecommunications base station design

Structural Design

Structural Design has always been the core business of Knapp Hicks and our engineers have vast experience in the design of a wide range of building structures. We have the expertise to produce economic and structurally efficient solutions regardless of the building form or type of materials used; be it a utilitarian industrial project, a prestigious commercial development or a public building demanding sympathetic treatment of aesthetic requirements.

Due Diligence, Feasibility Studies and Pre-Acquisition site appraisals

At an early stage in the acquisition or planning process, when potential development options are being considered, we are able to undertake detailed site appraisals or feasibility studies.

These studies can be fundamental in assessing the viability of any scheme, identifying potential risks to the development and deciding on the most commercially feasible design.

➤ Sectors

Knapp Hicks has a broad experience in a wide range of sectors including Health, Education, Retail, Business premises, and Industrial amongst others. Each sector presents its own distinct challenges and requirements in respect of the functionality of the building and we provide the design solution to meet these criteria.

➤ No job to big, no job to small

Knapp Hicks undertakes design services across a broad spectrum of construction projects, varying in scale from multi-million pound new build and refurbishment schemes to domestic extensions and alterations.

➤ Structural surveys and Investigations

Knapp Hicks undertakes structural surveys and provide advice to clients with respect to their own buildings or those they are contemplating buying or leasing, whether it be an individual domestic property or multi-storey structure.

More detailed structural investigations are undertaken on all types of structures. These range from bridges, tunnels and viaducts, to multi-storey buildings and historic structures with a view to providing either factual or interpretative reports with regard to condition, longevity, repair options or planned maintenance requirements.
